

Pig Herd Health Plans

What is a Pig Herd Health Plan (PHHP)?

- ✓ A single location for all your unit's health information
- ✓ A record of recommended dosage details and withdrawals for medicines
- ✓ A record of your unit's vaccinations
- ✓ An automatic link to your carcase data and condemnations

What are the benefits of using a PHHP?

- ✓ PHHPs enable you to share information with your staff and vet in a standard format
- ✓ Records are automatically archived and dated, creating a permanent health history
- ✓ PHHPs create efficient data handling, no more rewriting of basic information
- ✓ They are designed to accumulate information, show trends over time and aid decision making

Unlike current systems, this Internet-based PHHP reduces administration and office time by overcoming multiple data collection and duplication. It creates efficient data handling, with no more rewriting of basic information. In addition, data created during routine management and veterinary visits can be captured using digital pens and paper and transferred to a unique, password protected, single location.

Having all this data in one place allows you to:

- ✓ Create self-assessment records for hygiene management, environmental management and health assessments
- ✓ Create up-to-date output for quarterly veterinary reports, progress notes, or action lists

Health plans **when** you want them
Health plans as **you** want them ~ As much or as little as **you** need
